CALCIUM SILICATE PIPE SHIELDS

The Calcium Pipe Shield is a 360 degree pipe saddle enclosure, with **ASBESTOS FREE** calcium silicate. It is designed to support the suspended pipes in all construction projects. It supports the weight of the pipe and prevents abrasion and crushing from the weight of pipe. The working tolerances of the calcium silicate, range from 20 to 1200 degrees Fahrenheit. Calcium insulation can be dipped in waterproofing solution to prevent condensation when used for cold applications, or as requested per specification.
